Trans. of [Zhurnal] Tekhnicheskoy Fiziki (USSR)
1955, v. 25, no. 4, p. 711-719.

An examination is made of the problem involved in creating anisotropic media in a smooth metallic waveguide containing isotropic dielectric disks periodically distributed. Separate consideration is given to the systems of equations, derived from Maxwell equations describing the propagation of axially symmetrical electromagnetic waves, which characterize the propagation of E and H waves. Equations are derived for the effective values of the dielectric constants of an anisotropic dielectric, equivalent to disks, that completely fills the waveguide.
